

Objective & Strategy

This strategy seeks to provide higher risk-adjusted returns than the S&P 500 Index by reducing exposure to market downturns. To achieve this objective, the manager uses a macroeconomic factor-based strategy to select a diversified portfolio of equity securities that will benefit from the current macroeconomic environment and have reduced exposure to downside macroeconomic risk. As a result of this process, this strategy presents investors with a comprehensively diversified portfolio that maintains upside potential with reduced downside volatility.
