

Objective & Strategy

This strategy seeks to optimize returns in a risk-controlled framework, delivering consistent added value over a full business cycle. The strategy is designed to capture the benefits of diversification and the advantages that come from the dissimilarity in return patterns across different asset classes. To achieve this goal, the strategy invests in U.S. equities, international equities and fixed income securities. In addition to this strategic allocation, the manager performs tactical active risk management driven by the manager's view of current market conditions.
