

### Objective & Strategy

This strategy typically invests in micro-cap stocks with market caps up to \$1 billion. The manager intends to invest in companies with strong fundamentals and selling at prices that the manager believes do not fully reflect the attributes. This approach emphasizes the intersection of valuation with fundamental strength and/or excellent growth or turnaround potential. The manager looks for financially sound, micro-cap companies where gains can be achieved from market inefficiencies and seeks companies with low price-to-book value, price-to-earnings value, and debt levels.
